

Press Release

ChromaCon enters into an agreement with Analytical Technologies Group (ATG) to jointly offer to US clients a trade-in program to exchange aged equipment for new Contichrom systems

Zurich, Switzerland and Groton, CT, USA. April 17, 2018.

ATG Services has been a service provider for Contichrom® preparative FPLC and HPLC systems since 2016. ATG provides after sales and maintenance and repair services for chromatography equipment including Contichrom® in the USA. An extension of this agreement between ChromaCon and ATG now allows customer to trade in their used FPLC or HPLC equipment to receive a sizable discount when purchasing a new Contichrom® FPLC / HPLC system.

US customers interested in purchasing a Contichrom system to replace their used FPLC or HPLC systems can express their interest to trade an old machine in. The instrument will be evaluated by ATG based on basic information such as model type, original purchase date, serial number and photos. Based on these data, a discount will be offered for trading in the old equipment. The customer can then choose to accept the trade-in offer by transferring the system to ATG and receiving a new Contichrom® system at a discount value offered by the trade-in offer. The Contichrom® system can also be purchased without the trade-in offer. With this agreement the customer will have the benefit of replacing old FPLC/HPLC systems for a new Contichrom® system at a reduced purchase price of a new system.

Please inquire with ATG or ChromaCon for details on the trade-in program. The program may be subject to changes.

About ChromaCon AG

ChromaCon AG is a private Life Science Tool company located in Zürich, Switzerland, providing best-in-class laboratory chromatography equipment and process solutions to the biopharmaceutical industry. ChromaCon has developed and patented novel process principles, process control and simulation software, equipment designs and operating software for batch, cyclic and continuous chromatography. These process solutions result in significant CAPEX and OPEX cost savings and enabling scalable chromatographic solutions for large scale purification applications. The Contichrom® laboratory-scale equipment is co-marketed worldwide by ChromaCon and its partners. ChromaCon has provided global licenses for its process technologies to LEWA (Devens, MA, USA) for implementation into scale-up systems.
